Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Newman et al (6473523).

As per claim 1, Newman et al (6473523) teaches a portable translator for translating a first visual text in a first language into a second visual text in a second language (as a portable imaging device translating captured text →abstract; and the portable device being a camera -- col. 3 lines 19-34)), the portable translator comprising:

(a) a viewfinder for aiming the portable translator in a selectable direction and from a selectable distance at an object whereupon the first visual text appears, and for identifying an image including a target area containing the first visual text (as viewfinder of a pointing device in a camera – col. 3 lines 19-34; and a target area for visual text – col. 2 line 1-19);

(b) an electro-optical image acquisition unit including a lens and a light-sensitive sensor operative to acquiring a digital representation of said target area (as imaging unit -- fig. 2; col. 3 lines 30-35);

(c) an OCR unit operative to transforming said digital representation into a first string of character codes representative of the first visual text (as OCR image text into image buffer – col. 9 lines 5-20);

(d) a translator unit including an electronic dictionary, said translator unit operative to transforming said first string of character codes into a second string of character codes representative of the second visual text; (as translating the word into a second language (col. 8 line 65 – col. 9 line 24) and

(e) a display operative to showing the second visual text in accordance with said second string (as displaying the translated word – col. 8 line 65 – col. 9 line 12).

As per claim 2, Newman et al (6473523) teaches a screen operative to showing said image and a cursor control means for identifying said target area within said image (col. 4 lines 48-61).

Art Unit: 2655

As per claims 3-10, Newman et al (6473523) teaches display and viewfinder is part of the screen (fig. 2, viewfinder, and figs. 19-22; col. 3 lines 53-60)); lens focusing systems (col. 3 lines 25-35 → autofocus and zoom lens are part of conventional camera technology); an OCR operable with images stored in memory (col. 8 lines 5-21); and a light source as part of conventional camera technology (col. 3 lines 25-30).

As per claims 11-12,15,16, the scope of the claim language is similar in scope to claims 1-2 and are summarily rejected under the same rationale as presented above with respect to claims 1-2.

As per claims 13-15,17, the scope of the claim language is similar in scope to claims 1-2 and are summarily rejected under the same rationale as presented above with respect to claims 1-2. Furthermore, as a matter of completeness, Newman et al (6473523) teaches the use of the images in video format (col. 4 lines 30-35 → the image format can be captured in live video mode).
